

Microblading Consent Form

Before starting this process, please read the following to understand the requirements and proper before/after care to ensure the best care and results of your brows.

You are not a good candidate for microblading if...

- You are pregnant or breastfeeding - NO EXCEPTIONS
- You have a heart condition/pacemaker/defibrillator
- If you are prone to keloid scars (raised, dark in color)
- If you are a hemophiliac
- You have taken Accutane in the last year
- If you are taking any of the following medications (Triflusal (Disgren), Clopidogrel (Plavix), Prasugrel (Effient), Ticagrelor (Brilinta), Ticlopidine (Ticlid), Cilostazol (Pletal), Vorapaxar (Zontivity), Dipyridamole (Persantine, Coumadin, Pradaxia (dabigatran), Xarelto (rivaroxaban), Eliquis (apixaban), Savaysa (edoxaban)

MICROBLADING is a manual process in which hair-like strokes are individually placed at front (bulb) of brow and throughout the remainder of brow. This method is best for enhancing brows and is a great option for those with minimal hair growth. *HOWEVER microblading is not ideal for oily skin types due to pores typically found on this skin type and this method's application. Over time the pigment in the fine hair strokes may blend out and not offer the best results.

POWDER BROWS are created by gently and softly, layering color throughout the brows with a single needle. This method leaves a soft "filled in" look and suits most skin types. There is also more flexibility on preference between a look that's more natural or defined. This method tends to offer the best results as there is more pigment being deposited therefore prolonging the longevity of the brows.

HYBRID is the method of a combination of microblading and powder brows. Manual hair-like strokes are made to the front (bulb) of the brow and layers of color are then tattooed on to give the brows a natural and fuller look.

PROCESS: Here is a summary of what to expect

-Using precise measurements and tools, an ideal brow shape is drawn and mapped out.

-The technician will then shape brows to achieve the look discussed with the client that both works with the facial structure, skin type and satisfies the client.

-Pigments are selected and mixed to suit natural brow color. Matching color to natural BROW color, and not HAIR color, assures that results are as natural as possible.

-The first appointment takes from 90-120 minutes. Brows will appear darker and thicker after service, due to swelling, however color will fade throughout the following 1-2 weeks.

- The second appointment takes 90 minutes and is to be scheduled within 6-8 weeks after the initial appointment to assure final details. During this time, any pigment lost during the 6-8 week healing process can be retouched.

- The end results are beautiful, natural brows lasting between 1-2 years.

****It's important to keep in mind that touch-ups are highly recommended to maintain color and shape.

Before care instructions:

- DO NOT:
 - Drink caffeine or alcohol 24 hours before your procedure
 - Work out 24 hours before your procedure
 - Sunbathe/tan for one week prior
 - Take aspirin, Advil/Ibuprofen, Niacin, or Vitamin E for 24 hours prior
 - Take fish oil or "hair, skin, and nails" supplements for 24 hours prior
 - Use any skin care with acids (glycolic, salicylic, lactic, AHA, BHA) for 4 weeks prior (hyaluronic acid is OK)
 - Use chemical peels or retinol/Retin A for 4 weeks prior
 - Wax or tint brows for 1 week prior
 - Use a lash/brow serum on the treatment area 2 weeks prior
 - Wear contacts for an eyeliner procedure
- PLEASE NOTE:
 - You may be more sensitive if you're on your menstrual cycle
 - If you get fillers in the treatment area, they should be done 6 weeks before or 6 weeks after the procedure
 - If you get Botox, it should be done 2 weeks before or 2 weeks after the procedure
 - If you have oily skin, your results will appear softer and you may require more procedures
 - Results will not appear as bold on darker skin tones

After care instructions:

- AVOID:
 - Rubbing, scratching, or picking at the treated area while healing
 - Sun exposure and tanning beds for at least 4 weeks (this can cause sensitivity and lightening of color)
 - Pools, saunas, steam rooms, hot showers/baths for 2 weeks
 - Sweating for at least 10 days - NO EXCEPTIONS (this can cause loss of color and possible infection)
 - Sleeping on your face for 10 days
 - Makeup and your normal skin care products on the treated area for 10 days
 - Facials, chemical treatments, or exfoliants for 4 weeks
 - Skin care with acids (glycolic, salicylic, lactic, AHA, BHA) on the treated area once healed

- BROW REGIMEN:
 - Blot (don't wipe) brows with a clean tissue every 20 minutes for the next few hours
 - Gently wash with gentle cleanser (Cetaphil, Dial, CeraVe, baby shampoo, mild soap), pat dry, and apply a VERY THIN layer of aquaphor before bed
 - First 10 days: wash & apply Aquaphor morning & night
- WHAT TO EXPECT:
 - Days 1 & 2: Brows will appear darker and thicker. Your skin will likely be inflamed and red under the pigment (pigment may also appear warmer). You may experience some temporary swelling.
 - Day 3: New skin will start to heal over the tattoo and may become itchy.
 - Days 4-6: Skin begins to flake and peel - DO NOT PICK AT IT.
 - Days 7-10: Skin finishes flaking and pigment will appear lighter and possibly grayer.
 - Week 4: Pigment will clarify and return to the surface, appearing a bit darker and more true to color.
 - Each appointment requires a follow up is an additional charge
